Producing an antibody or antigen binding fragment in high yield in a cell culture, comprises expressing a variable domain with a modified framework region in a host cell.

Claim 15; SEQ ID NO 1; 161pp; English.

The present invention describes a method for producing an antibody or antigen binding fragment in high yield in a cell culture. The method comprises expressing a variable domain of the antibody or antigen binding fragment comprising a modified framework region (FR) in a host cell, and recovering the antibody or antigen binding fragment variable domain comprising the modified framework from the host cell. The modified FR in the method described above has a substitution of at least one amino acid

```
The antibody or antigen binding fragment variable domain.

The antibody or antigen binding fragment variable domain comprises the modified FR that has improved yield in cell culture compared to an undofified antibody or antigen-binding fragment. The antibody and antigen binding fragment or antigen-binding fragment. The antibody and antigen binding fragment antibody and antigen binding fragment antibody and antigen confoured in antibody therapy. The methods and compositions of the present invention are useful for producing antibodies or antigen binding fragments in cell culture, in barticular for improving the yield of recombinant antibodies or antigen binding fragments in cell culture. The antibodies of the invention can be used to diagnose, treat, inhibit or prevent e.g. tumours and inflammatory, angiogenic and immunological disorders. The present celecter represents a heavy chain FRI peptide of an anti-VEGF (vascular endothelial cell growth factor) antibody, which is used in the exemplification of the present invention.
                       the amino acid found at the corresponding FR position of a human subgroup variable domain consensus sequence that has a hypervariable region 1 (HVR1) and/or HVR2 amino acid sequence with the most sequence identity

Managing, treating or ameliorating in a human subject a respiratory infection or its symptoms caused by bacteria, fungi or respiratory syncytial virus by administering an IL-9 antagonist.

Disclosure; SEQ ID NO 33; 276pp; English.

The invention relates to a method of managing, treating or ameliorating a respiratory infection or its symptom in a human subject by administering

an interlemental of the subject an anti-respiratory syncytial virus (anticompanies antibody. The anti-RSV antigen antibody is palivizumeb. The
method futther comprises administering a leukotriene modifier, which is
method of preventing the development, onset or progression of asthma or
one or more asthma-like symptoms in a child, a method of preventing,
one or more asthma-like symptoms in a child, a method of preventing,
or child, a method of preventing wheezing in a pre-term infant, infant
or child, a method of preventing, managing, treating or ameliorating asthma or an alleray or its symptoms in a human subject. and a method of preventing, managing,
treating or ameliorating asthma or an alleray or its symptoms in a human subject. Preventing in a human subject, once asthma-like symptoms in a child having or previously having a subject. Preventing the development, onset or progression of asthma or
one or more asthma-like symptoms in a child having or previously having a respiratory infection comprises administering an IL-9 antagonist. The
contact of thild comprises administering an IL-9 antagonist. The
infant, infant or child comprises administering in a lugan subject comprises administering or ameliorating wheezing in a human subject comprises administering or an il-9 antagonist. The definition of an IL-9 antagonist. The method further comprises administering or a matiinflammatory agent, an anti-viral agent, an anti-interior or a mast call modulator. The method further comprises
administering to the subject a leukotriene modifier, an anti-interior administering an IL-9 antagonist and an least one other antibody, an anti-interior and anti-interior an anti-interior and anti-interior and anti-interior and anti-y antagonist and an antibody, an anti-interior and anti-interior and anti-y antagonist and an anti-pass in an anti-y antagonist and an anti-pass in an anti-pass in an anti-pass in an anti-pass in Sequence 25 AA; against

The invention describes a new composition comprising a CD20 binding molecule having a binding affinity (Kd) for human CD20 of 5.0 x 10 -10 M or less, and a dissociation rate (Koff) for human CD20 of 5.0 x 10 -4 s-1 or less, Also described is a method of treating B cell lymphoma. The CD20 binding molecules are useful for preparing a composition for treating B cell lymphoma. This is the amino acid sequence of human heavy chain framework region VHI DP7/21-2 FRL1 used in the creation of a CD20 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New composition comprising a CD20 binding molecule having a binding affinity (Kd) for human CD20 and a dissociation rate (koff) for human, useful for preparing a composition for treating B cell lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 95; 84pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADY31444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a new IL-9 antibody comprising: a variable heavy CC (WH) or variable light (VL) domain having an amino acid sequence of the VH or VL domain of 4D4, 4D4 H2-1 D11, 4D4ccm-XF9, 4D4ccm-ZF9, 7F3, 7D40, 22D3, 7P3ccm-2H2, 7F3ccm-3H5 or 7F3ccm-3H5 or 7F3ccm-3H5 or 7F3ccm-3H5 or 7F3ccm-3H5.

CC 22D3, 7P3ccm-3H5 or 7F3ccm-3H5, 7D4 or a complementarity of 4D4 H2-1 D11, 4D4ccm-XF9, 4D4ccm-ZF9, 7F3, 7LA10, 22D3, 7F3ccm-2H2, 4D4 CC C F3ccm-3H5 or 7F3ccm-3H5.

CC 7F3ccm-3H5 or 7F3ccm-3H5. The antibody immunospecifically binds to a comprising the IL-9 antibody and a carrier; a method for preventing, comparising the IL-9 antibody and a carrier; a method for preventing, comparising the IL-9 antibody and a carrier; a method for preventing, a describing the aberrant expression or activity of an IL-9 polypeptide or an IL-9F, a comprising the contained within the packaging material and an article of manufacture comprising a packaging material and a carrier. The IL-9 pharmaceutical agent contained within the packaging material, where the pharmaceutical agent contained within the packaging material, where the pharmaceutical agent comprises the IL-9 antibody and a carrier. The IL-9 pharmaceutical agent comprises the IL-9 antibody and a carrier. The IL-9 contained within the packaging material, where the pharmaceutical agent comprises the IL-9 antibody and a carrier. The IL-9 crivity of an IL-9 polypeptide or an IL-9F, e.g., respiratory infection caused by bacteria or respiratory syncytial vitus, parainfinenza vitus or human metapneumovirus, inflammatory disorder such as sthmia, allergy or arthritis or autoimmune disorder such as rheumatoid arthritis and multiple sclerosis. This is the amino acid sequence of a human IL-19 mining fermine acid 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                           New IL-9 antibody comprising a variable heavy or light domain or a complementarity determining region having an amino acid sequence of e.g., 4D4, useful in treating or preventing e.g., respiratory infection or

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                             DNA library; humanized antibody; antibody engineering; heavy chain.
Human antibody heavy chain framework peptide - SEQ ID 276.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 276; 179pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                 The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA library; humanized antibody; antibody engineering; heavy chain.
                                                                                                                                                                                                                                                       DNA library; humanized antibody; antibody engineering; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 25;
                                                                                                                                                                                     Human antibody heavy chain framework peptide - SEQ ID 285.

The human framework sequence FR1 was used in the prodn. of humanised monoclonal antibodies comprising antigen binding sites (CDRs) of non human origen based on consensus sequence of CDRs. The sequence is a heavy chain framework region. The humanised antibodies or their chimeric variants may be used as therapeutic or diagnostic agents in order to combat e.g. glioma, melanoma or carcinoma. See also AAR27299-300 and AAR27037-51. (Updated on 25-MAR-2003 to correct PN field.)
light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Monoclonal antibody; complementarity determining region; CDR; antigens; tumour; melanoma; carcinoma; glioma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                     New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chain
                                                                                                                                                                                                                                                                                                       The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA library; humanized antibody; antibody engineering; heavy chain.

The invention relates to an antibody molecule having specificity for human tumour necrosis factor-alpha (TNFalpha) comprising a heavy or light combined to the compound comprising the antibody is useful for treating or manufacturing a medicament for treating a pathology mediated treating or manufacturing a medicament for treating a pathology mediated diseases which can be treated by the antibody include sepsit, congestive conferences such can be expected by the antibody include sepsit, congestive conferences such cachexia, adult respiratory distress syndrome, acquired immunodeficiency syndrome (AIDS), allergies, consensis, inflammatory bone disorders, blood coagulation disorders, burns, rejection episodes following organ or tissue transplant, Crohn's disease and autoimmune diseases, such as thyroiditis. The antibodies may also be used to reduce the side effects associated with TNFalpha generation during neoplasty therapy, to eliminate or reduce shock-related symptoms associated with the treatment or prevention of graft rejection by use of an anti-lymphocyte antibody, for treating multicorregan failure, or in the diagnosis and imaging of disease states involving elevated levels of TNF alpha. The present sequence is human cross group I consensus peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody specific for human tumor necrosis factor (TNF)-alpha, useful for treating TNF-alpha-mediated diseases, e.g. congestive heart failure, septic or endotoxic shock, cachexia, adult respiratory distress syndrome.
                  Human; tumour necrosis factor 40; TNF40; osteopathic; cardiant; CDR; complementarity determining region; rheumatoid; osteo-arthritis; sepsis; congestive heart failure; shock; tissue transplant; tuberculosis; ADDS; Acquired Immune Deficiency Syndrome; adult respiratory distress syndrome; acchexia, allergy; psoriamis; blood coagulation disorder; thyroiditis; inflammatory bone disorder; Crohn's disease; autoimmune disease; burn; neoplasty therapy; immunomodulator; vulnerary; graft rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunoglobulin; antibody; light chain; heavy chain; CDR; FR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This represents the amino acid sequence of the framework 1 region of human antibody clone Amu 5-3. This is used to construct a humanised antibody LO-CD2a. The invention relates to the use of the memoclonal antibody (MAD) LO-CD2a or a humanised or a chimeric version of the LO-CD2a antibody for the inhibition of a T-cell mediated immune response in a patient. The MAD LO-CD2a (produced by hybridoma cell) line ATCC HB 11423) can bind to an epitope on the CD2 antigen of the human lymphocytes. The T-cell mediated immune response in a patient can be inhibited by administering the MAD LO-CD2a or an antibody that binds to the same human lymphocyte epitope as LO-CD2a or an antibody that binds to preventing transplant rejection or for treating graft-versus-host disease or for treating graft-versus-host disease
                                                                                                                                                                                                                                                                                             Monoclonal antibody; MAb; LO-CD2a; humanised antibody; CD2 antigen; human lymphocyte; immune response; chimeric; graft-versus-host disease; T-cell; transplant rejection; autoimmune disease; Amu 5-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inhibition of T-cell mediated immune response with anti-CD2 monoclonal antibody LO-CD2a - used for preventing transplant rejection or for treating graft-versus-host disease or auto-immune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polymucleotides encoding different immunoglobulin binding protein (1989) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polymeptides in transformed plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has at least 75% sequence identity to a framework region (RR) of a native 1gM, 1gG, 1gA, sequence identity to a framework region (RR) of a native 1gM, 1gG, 1gA, 1geful for preparing an immunoglobulin molecule. The method is cusful for preparing an immunoglobulin binding protein array, preferably chany chain binding protein (CHB) array in eukaryotic cells especially cells (e.g. insect cells or mammalian cells). The CHBP is useful for discovery of e.g. screening assays of 1gBPs having desired characteristics. The present sequence is a mammalian immunoglobulin derived peptide that may be incorporated into an 1gBP of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                light chain variable region; complementarity determining region; asthma; atopic dermatitis; allergic rhinitis; fibrosis; inflammatory bowel disease; Hodgkins disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynucleotides encoding binding protein polypeptides specific to ligand, selecting plant cells for preparing array.

The invention relates to an isolated specific binding molecule (I) for human interleukin (IL)-13, comprising an antibody antigen-binding domain site composed of human antibody WH and VL domain comprising a set of complementarity determining regions (DRS) HCDR1, HCDR2, HCDR3, LCDR1, LCDR2 and LCDR3, (I) is useful for in vitro binding of (I) to human IL-13 or its fragment. and further involves determining the amount of binding of (I) to IL-13 or its fragment. (I) is useful in the manufacture of a medicament for treatment of a disease or disorder chosen from asthma, atopic dermatitis, allergic rhinitis, fibrosis, inflammancory bowel disease and Hodgkin's lymphoma. (I) is useful in disgnosing diseases such as asthma, atopic dermatitis, in the subject. (I) preferably neutralizes human IL-13. This sequence corresponds to protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated specific binding molecule for human interleukin-13, having antibody antigen-binding domain site composed of human variable heavy and light chain domains with complementarity determining regions, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody engineering; antibody production; immunosuppressive; immunotherapy; heavy chain variable region; light chain variable region; graft rejection; graft versus host disease; autoimmune disease.

Postema CE;

The invention relates to a humanized antibody comprising the CDRs from LO-CD2a, produced by the cell line deposited as American Type Culture Collection (ATCC) HB11423, the humanized antibody containing in the framework of the heavy chain variable region of the humanized antibody, amino acids 47,67,70,72,76,85, and 87, and one, two, three, or four of amino acids 12, 13, 28, and 48 of the rat LO-CD2a heavy chain variable region of 118 amino acids, fully defined in the specification. The antibody is useful for preventing or inhibiting graft rejection, graft versus host disease or autoimmune disease. This sequence corresponds to a peptide used in the invention. New humanized antibody comprising the complementary determining regions (CDRs) from LO-CD2a, useful for preventing or inhibiting graft rejection, graft versus host disease or autoimmune disease. Example 7; SEQ ID NO 52; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 14

S31680

Gibeavy chain V region - human

Gispecies: Homo sapiens (man)

Gispecies: Homo sapiens

Gispecies: Jama-1994 #sequence_revision 10-Nov-1995 #text_change 23-Jul-1999

Gispecies: A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.

Submitted to the EMBL Data Library, June 1992

Aipescription: Mechanisms that generate human immunoglobulin diversity operate from the Aiperence number: S31589

GENERAL INFORMATION:

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: The Government of the United States of America, as represented by The

APPLICANT: Secretary of the Department of Health and Human Services

APPLICANT: Rashmiri, Syed V.S.

APPLICANT: Padian, Eduardo A.

APPLICANT: Jeffery, Schlom

TITLE OF INVENTION: VARIANTS OF HUMANIZED ANTI-CARCINOMA MONOCLONAL ANTIBODY CC49

FILE REFERENCE: 4239-61725

CURRENT APPLICATION NUMBER: US/09/830,748B

CURRENT APPLICATION NUMBER: US/09/830,748B

CURRENT APPLICATION NUMBER: US 60/106,757

PRIOR APPLICATION NUMBER: US 60/106,757

PRIOR PILING DATE: 1999-10-29

PRIOR APPLICATION NUMBER: US 60/106,534

US-09-281-133

US-09-281-133

Sequence 133, Application US/09269921

Patent No. 669994

GENERAL INFORMATION:

APPLICANT: Onco, Koichiro

APPLICANT: Onco, Toshinko

APPLICANT: Yoshimura, Yasushi

APPLICANT: Koishimura, Yasushi

PILE REFERENCE: 35029-20007.00

TITLE OF INVENTION: RESHAPED HUMAN ANTI-HM 1.24 ANTIBODY

FILE REFERENCE: 35029-20007.00

CURRENT PILING DATE: 1999-04-01

SEALIER APPLICATION NUMBER: US/09/269,921

CURRENT FILING DATE: 1999-04-01

SEALIER PILING DATE: 1999-04-01

SEALIER PILING DATE: 1996-10-03

RABLIER PILING DATE: 1996-10-04

NUMBER OF SEQ ID NOS: 137

SOFTWARE: PATENTIN Ver. 2.0

Producing an antibody or antigen binding fragment in high yield in a cell culture, comprises expressing a variable domain with a modified framework region in a host cell.

Claim 15; SEQ ID NO 2; 161pp; English.

The present invention describes a method for producing an antibody or antigen binding fragment in high yield in a cell culture. The method comprises expressing a variable domain of the antibody or antigen binding fragment comprising a modified framework region (FR) in a host cell, and recovering the antibody or antigen binding fragment variable domain comprising the modified framework from the host cell. The modified FR in the method described above has a substitution of at least one amino acid

```
the amino acid found at the corresponding FR position of a human subgroup variable domain consensus sequence that has a hypervariable region 1 (HVR1) and/or HVR2 amino acid sequence with the most sequence identity with a corresponding HVR1 and/or HVR2 sequence of the variable domain.

The antibody or antigen binding fragment variable domain comprises the modified R that has improved Yield in cell culture compared to an unmodified antibody or antigen-binding fragment. The antibody and antigen binding fragment The antibody and antigen binding fragment and in antibody series.

The inding fragment have cytostatic, antinflammatory, antiangiogenic and immunomodulatory activities, and can be used in antibody therapy. The methods and compositions of the present invention are useful for producing antibodies or antigen binding fragments in cell culture, in particular for improving the yield of recombinant antibodies or antigen binding fragments in cell culture. The antibodies of the invention can be used to diagnose, treat, inhibit or prevent e.g. tumours and infundological disorders. The present candothelial cell growth factor) antibody, which is used in the cadenar antibody can antibody, which is used in the cempular candothelial cell growth factor) antibody, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.

The invention relates to an antibody which binds to an epitope on gp39, is new, where the epitope is distinct from the epitope bound by IDEC-131, and the antibody has a non-agonistic effect on T-cell activation and inhibits gp39/CD40 interaction. Also included are: (1) an improved method inhibits gp39/CD40 interaction comprishing administering an antibody specific for gp39/CD40 interaction comprishing administering an antibody interaction comprishing an antibody specific for gp39 that inhibits the gp39/CD40 interaction and is non-agonises B-cell differentiation and antibody production, and is non-agonises B-cell differentiation and antibody production, and is non-agonistic of T-cell activation; (3) a DNA sequence which encodes an antibody edined above; (4) an expression vector, which conclains a DNA sequence of (3); (5) a method of suppressing vector, which conclains a DNA sequence of (3); (5) a method of suppressing control and/or cellular immune responses against cells or vectors administering or after gene therapy comprising further administering prior, during or after gene therapy comprising further administering collular interaction of cells, tissues or organs of the same or different species into a subject, where the improvement comprises administering an antibody defined above prior, during or after transplantation, to suppress immune responses gapainst the transplanted cell; tissue or organ against the responses elicited by the transplanted cell, tissue or organ against the responses host. The antibody is useful for preventing graft rejection, and for

treating autoimmune diseases, e.g., rheumatoid arthritis, multiple sclerosis, diabetes, asthma, multiple sclerosis, allergic conditions, diabetes mellitus, or systemic lupus erythematosus, as well as non-autoimmune diseases such as graft-versus-host disease (many other diseases and conditions are given in the specification). The antibodies are also useful in gene or cellular therapy, and to inhibit humoral and cellular immune responses against viral vectors. The present sequence is a framework region (FR) fragment of a human anti-gp39 antibody used to determine which amino acids should be humanised in a mouse anti-gp39

(IDEC-) IDEC PHARM CORP.

Rastetter WH, Kloetzer WS; Hanna N, Anderson DR, Pan LZ,

New antibodies binding to an epitope on gp39, useful for preventing graft rejection, or for treating autoimmune diseases (e.g. diabetes, asthma or multiple sclerosis), and non-autoimmune diseases (e.g. graft-versus-host WPI; 2002-188261/24. disease).

Disclosure; Page 47; 130pp; English.

The invention relates to an antibody which binds to an epitope on gp39, is new, where the epitope is distinct from the epitope bound by IDEC-131, and the antibody has a non-agonistic effect on T-cell activation and inhibits gp39/CD40 interaction. Also included are: (1) an improved method of treating a disease by modulating gp39 expression or inhibiting the gp39/CD40 interaction comprising administering an antibody specific for gp39 that inhibits the gp39/CD40 interaction and is non-agonistic of T-cell activation; (2) an antibody which antagonises B-cell differentiation and antibody production, and is non-agonistic of T-cell activation; (3) a bNA sequence which encodes an antibody defined above; (4) an expression vector, which contains a DNA sequence of (3); (5) a method of suppressing

ö
with polypeptides in transfected cells, to generate an IgBP that binds to a rigand, and transferned plant cells, to generate an IgBP that binds to arigand, and transformed plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has at least 75# sequence identity to a framework region (PR) of a native IgM, IgG, IgA, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably heavy chain binding protein (GRBP) array in eukaryotic cells especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. insect cells or mammallan cells). The CHBP is useful for discovery of e.g. screening assays of IgBPs having desired characteristics. The present sequence is a mammalian immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an
                                                                                                                                                                                                                                                  derived peptide that may be incorporated into an IgBP of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ody from a first species for use in a second species. The present acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                        Gaps

This invention relates to a novel isolated human antibody that specifically binds to secretory leukocyte protease inhibitor (SLPI). The invention may be useful for the development of compounds with a cytostatic activity or for immunotherapy. The antibody, composition and methods are useful for treating and preventing cancer. The antibodies are useful for the presence of SLPI in biological samples. The present sequence is that of a peptide which was used during the development of the novel antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated human antibody that specifically binds to secretory leukocyte protease inhibitor \{SLPI\}, useful for treating and preventing

The invention relates to a novel monoclonal antibody used for inhibiting tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has
                                                                                                    The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to WUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of WUC18 on the cell surface such as tumours, specifically melanoma, oseophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intraspithelial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human WUC18 antibody-related consensus protein of the invention derived from analysis of germline gene region proteins and anti-human WUC18 monoclonal antibody sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                monoclonal antibody; tumour; MUC18; proliferation; cytostatic; vaccine; antigen; tumour metastasis; melanoma; metastatic; human; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anti-MUC18 antibody heavy chain variable region 4-31 consensus protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Use of monoclonal antibodies against MUC18 antigen, for diagnosing and treating tumors, inhibiting tumor growth, inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a
or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 124; DB 7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel isolated human antibody that specifically binds to secretory leukocyte protease inhibitor (SLPI). The invention may be useful for the development of compounds with a cytostatic activity or for immunotherapy. The antibody, composition and methods are useful for treating and preventing cancer. The antibodies are useful for detecting the presence of SLPI in biological samples. The present sequence is that of a peptide which was used during the development of the novel antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anti-human MUC18 monoclonal antibody; heavy; light chain variable domain; cytostatic; melanoma; oesophageal; pancreatic; colorectal tumour; cervical carcinoma; intraepithelial neoplasia; colorectal; breast;
                                                                                                                                                                                                                                                                                                                                                       New isolated human antibody that specifically binds to secretory leukocyte protease inhibitor (SLPI), useful for treating and preventing

The method involves administering anti-MUCIB monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUCIB tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence is a consensus sequence from an alignment between an MUCIB tumour antigen-specific monoclonal antibody of the invention and a
cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody heavy chain, variable region,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting cell proliferation associated with expression of MUCIS tumor antigen, involves incubating and inhibiting cell by administering anti-MUCIS monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cell proliferation inhibition; MUC18 tumour antigen; anti-MUC18 monoclonal antibody; tumour metastasis inhibition; tumour; carcinoma; cancer; malignancy; consensus.

invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the cell surface such as tumours, specifically melanoma, osophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intraepithelial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUC18 antibody-related consensus protein of the invention derived from analysis of germline gene region proteins and anti-human MUC18 monoclonal antibody sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    anti-human MUC18 monoclonal antibody; heavy; light chain variable domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to a novel monoclonal antibody used for inhibiting tumour growth in an animal. The tumour inhibition process comprises cumour growth in an animal. The tumour inhibition process comprises comprises can animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in thibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and treating tumourse, inhibiting cumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody heavy chain, variable region,
                         Anti-MUC18 antibody heavy chain variable region V4-31 consensus protein.
                                                                                                       monoclonal antibody; tumour; MUC18; proliferation; cytostatic; vaccine; antigen; tumour metastasis; melanoma; metastatic; human; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of monoclonal antibodies against MUC18 antigen, for diagnosing and treating tumors, inhibiting tumor growth, inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a

Lazarovits J, , Peretz T; Plaksin D, Hagai Y, cell proliferation inhibition; MUC18 tumour antigen; anti-MUC18 monoclonal antibody; tumour metastasis inhibition; tumour; carcinoma; cancer; malignancy; consensus.

WO2003057837-A2.

Synthetic.

```
The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastaais. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other melignancies. The present amino acid sequence is a consensus sequence from an alignment between an MUC18 tumour antigen-specific monoclonal antibody of the invention and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, Fv molecule, hypervariable region; single chain Fv; cytostatic; disulfide Fv; dsFv; scFv; cancer; carcinoma; sarcoma; leukaemia; adenoma; lymphoma; myeloma; blastoma; seminoma; melanoma; acute myeloid leukaemia.
                                                                                                                                                                                       Inhibiting cell proliferation associated with expression of MUC18 tumor antigen, involves incubating and inhibiting cell by administering anti-MUC18 monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Levanon A;

Novel peptide/polypeptide for cancer therapy has Fv molecule, construct or fragment, or construct of fragment with enhanced binding characteristics so as to selectively bind target cell in favor of other cella.

Claim 13; Page 194-195; 232pp; English

The invention relates to a peptide or polypeptide comprising an Fy molecule, a construct or fragments or a construct of a fragment with chanced binding characteristics which selectively and/or specifically binds to a target cell in favour of other cells, where binding is cancered binding characteristics which selectively and/or specifically binds to a target cell in favour of other cells, where binding is chain FV (scPV) or a disulfide FV (dsFV). The peptide, optionally in association with or attached, coupled, combined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, myeloma, blastoma, seminoma, and medianoma, where the leukaemia cell is an composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human FV molecule hypervariable region related peptide of the invention

US-GR-925-339-19

SEQUENCE 19, Application US/08925339

Patent No. 6440418

GENERAL INFORMATION:
PAPLICANT: BLACK, Amelia

APPLICANT: BADLAN, Reduard A.

TITLE OF INVENTION: HUMANIZED ANTIBODIES TO HUMAN gp39,

TITLE OF INVENTION: HUMANIZED ANTIBODIES TO HUMAN gp39,

TITLE OF INVENTION: COMPOSITIONS CONTAINING AND THERAPEUTIC USE THEREOF NUMBER OF SEQUENCES: 28

CORRESPONDENCE ADDRESS:

ADDRESSES: Burns, Doane, Swecker & Mathis

STREET: P.O. Box 1404

CITY: Alexandria

STRATE: Virginia

COUNTRY: United States

ZIP: 22313-1404

COMPUTER: IBM PC COMPAILIBE

COMPUTER: IBM PC COMPAILIBE

COMPUTER: IBM PC COMPAILIBE

SOFTWARE: PLODS/MS-DOS

SOFTWARE: PATENTIN Release #1.0, Version #1.30

CURRENT APPLICATION NUMBER: US/08/925,339
                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
